1) At nominal output power and nominal line voltage. Soft-start to limit turn-on surge currents.
2) According to IEC60990: Protective conductor current: 50 Hz component @400 VAC/50Hz/P_{nom}
For weighted touch current: Measured for perception/reaction
Protection with earth leakage circuit breaker possible. An additional PE connection is necessary.
3) Current according to the given power limit of the corresponding units. ($P = V_{Load} * I_{Load} \leq 32$ kW; for $I_{Load} > 53$ A --> $V_{Load} < 600$ V).
Information about derating can be found on page 2.
4) The maximum value of the internal resistance is automatically calculated via the DC nominal values
